EDUCATION

University of South Florida

Tampa, FL

Bachelors of science in Computer Science - GPA: 3.91/4.0

Expected Graduation: May 2027

Relevant Courses: Data Structures(C++), Algorithms (Princeton University), Programming Concepts (Python), Program Design (C), Computer Organization, Discrete Structures, Linear Algebra, Calculus I

TECHNICAL SKILLS

Programming Languages: Python, C, C++, Java, JavaScript, Go, SQL, HTML, CSS

Frameworks/Libraries: React.js, React Native, Node.js, Express.js, Django, FastAPI, PostgreSQL, MongoDB, SQLAlchemy, NEAT-python, Pygame, Selenium, BeautifulSoup

Developer Tools: Linux, Git, Postman, Docker, AWS, Heroku

EXPERIENCE

Amazon Web Services

Redmond, WA

Incoming Software Development Engineering Intern

Fall 2025

- Incoming Software Development Engineering Intern Fall 2025

Dropbox

San Francisco, CA

Incoming Software Engineering Intern

Summer 2025

- Incoming Software Engineering Intern Summer 2025

SHIELD Lab at USF

Tampa, FL

Undergraduate Research Assistant

September 2024 – Present

- Developed an app for the Mac Parkman Foundation, aiming to reach over **5,000 individuals** and raise awareness about concussion prevention through engaging educational outreach, featuring live 3D animations, interactive graphs, and real-time metrics.
- Built a scalable back-end with Django, leveraging Web Sockets to support up to **1,000** data points per second received from external sensors, ensuring seamless data flow and minimizing any delay to the front-end.
- Planned software development life cycles using Sprint methodologies, ensuring timely delivery of features through CI/CD pipelines.

Jamaa

Tampa, FL

Co-Founder & Lead Developer

May 2024 – Present

- Led a team of **3** to co-develop a cross-platform mobile app that connected users with their local Muslim community by enabling mosques to share posts, events, and prayer times, resulting in increased community engagement and participation.
- Utilized Django's REST Framework to develop **25+** RESTful APIs for different types of users and optimized data storage using table partitioning and indexing in a PostgreSQL database, achieving a **53%** reduction in query response time.
- Designed the front-end using React Native and NativeWind and created user interfaces for the explore page, profile pages, and other components using custom hooks and React's Context API, resulting in page load times decreasing from **200ms to 65ms**.

Shawarma Bono

Remote

Software Engineering Volunteer

May 2024 – August 2024

- Designed and developed a full-stack website for a Shawarma restaurant using the MERN stack, optimizing website performance to support over **500 daily users**, achieving a revenue increase of **\$24,000** and improving overall customer order efficiency
- Implemented the front-end of the application with React.js and Material UI, enabling features such as user registration, menu browsing with food customization, cart management, and a checkout process that sends orders directly to the restaurant.
- Developed a Node.js server using Express.js, designed and implemented scalable API endpoints tested through Postman, and integrated JWT for securing the user's sensitive data and for authentication, resulting in a **35%** improvement in API response time.

PROJECTS

Lugha - ShellHacks Project | *FastAPI, PostgreSQL, SQLAlchemy, OpenAI, Groq, Jitsi* | [GitHub](#)

- Spearheaded the development of a language learning app using React Native and Expo with **300+** interactive lessons and quizzes to provide users with structured learning, improving language retention and foundational skills.
- Architected a ranking system using a max-heap and a priority queue to match users for skill-based voice calls, integrating the Jitsi API to enable real-time voice calls
- Built a back-end system to transcribe user-uploaded audio into Arabic text, generate AI responses using OpenAI's Whisper and Meta's Llama models, convert them to speech, and stream the audio to the front-end for real-time interaction.

HalalMate | *React, FastAPI, PostgreSQL, SQLAlchemy, Selenium, BeautifulSoup, Heroku, AWS, HTML/CSS* | [GitHub](#)

- Developed a web application using Selenium WebDriver and BeautifulSoup to scrape and filter food data from all three USF dining halls, with **99.5%** accuracy in identifying pork-containing items, enabling students to easily view pork-free food options.
- Created a backend server to scrape food data every **3 hours** automatically, updating the database with new items while deleting outdated entries to optimize storage management and retrieval times. Deployed with Heroku and AWS RDS.

LEADERSHIP & PROFESSIONAL DEVELOPMENT

ColorStack USF | Tech Lead

May 2024 - Present

- Recruited **50+** underrepresented students in STEM and promoted the ColorStack mission, increasing chapter visibility and engagement.
- Hosted a back-end development workshop, helping **20+** members to gain hands-on experience and improve their technical proficiency.

Citi | 2025 Early Identification Program Technology Track

January 2025 - February 2025

- Selected for Citi's highly competitive program, receiving 1:1 mentorship with mock interviews and business insights with Citi engineers.

Accenture | Innovation Challenge

January 2025 - February 2025

- Selected to collaborate on a project with a team and coach, with the chance to compete in the final round at Accenture's D.C. office
